

## Linux Loving Men Are Sexier

Contributed by Duke Morrison

No one had broached the subject. My inquiries with girlfriends and colleagues led me down a path into a revealing and sensual world as yet undiscovered. Or at least, as our senior editor put it, "one that few have had the chutzpah to print."

I discovered intimate bedroom secrets of why some women are explicitly attracted to those lovable fellows who prefer the penguin, and I'm not talking about some strange sex toy.

I'm talking about Linux.

"Passion," was a common response among the women I spoke with. Men who tend to use and enjoy Linux have a built in passion.

"All that passion is going to burst out," says one of my friends. She thinks her Linux loving husband has a natural excitement and that his enthusiasm for all things Linux often just flows out into other everyday activities.
